These results provide a snapshot of the E. coli bacteria concentrations at the designated sites on the date, time, and under the conditions that the water samples were collected.

A. The following bacteria criteria (colony forming units (CFU/100 ml) shall apply to protect primary contact recreational uses in surface waters, except waters identified in subsection B of this section. E.coli bacteria shall not exceed a monthly geometric mean of 126 CFU/100 ml in freshwater. Enterococci bacteria shall not exceed a monthly geometric mean of 35 CFU/100 ml in transition and saltwater. 1. Enterococcus bacteria shall not exceed a monthly geometric mean of 126 CFU/100 ml in transition and saltwater. 2. Geometric means shall be calculated using all data collected during any calendar month with a minimum of four weekly samples. 3. If there are insufficient data to calculate monthly geometric means in freshwater, no more than 10% of the total samples in the assessment period shall exceed 235 E.coli CFU/100 ml. 4. If there are insufficient data to calculate monthly geometric means in transition and saltwater, no more than 10% of the total samples in the assessment period shall exceed enterococci 104 CFU/100 ml.
