Friends of the Shenandoah River's 2019 Summer Quantitative *E. coli* Test Results at public recreational use sites on the Main Stem, South Fork and North Fork of the Shenandoah River and the Opequon Creek

These results provide a snapshot of the *E. coli* bacteria concentrations at the designated sites on the date, time, and under the conditions that the water samples were collected. Data points in RED exceeded the Virginia water quality standard maximum threshold of 235 CFU of *E. coli* per 100 mL in freshwater.
