

Friends of the Shenandoah River's 2025 Summer Quantitative *E. coli* Test Results at public recreational use sites on the Main Stem, South Fork and North Fork of the Shenandoah River

These results provide a snapshot of the *E. coli* bacteria concentrations at the designated sites on the date, time, and under the conditions that the water samples were collected.

SITE ID	SITE DESCRIPTION	5/22	5/29	6/4	6/11	6/18	6/25	7/2	7/9	7/16	7/23	7/30	8/6	8/12	8/20	8/27

- Sites located on the Main-stem Shenandoah River in Clarke and Warren County VA
- Site located on Manassas Run a tributary of the Main-stem Shenandoah River in Warren County VA
- Sites located on the South Fork Shenandoah River in Warren and Page County VA
- Site located on Hawksbill Creek a tributary of the South Fork Shenandoah River in Page County VA
- Sites located on the North Fork Shenandoah River in Shenandoah County VA

RED indicates the *E. coli* concentration exceeded the US Environmental Protection Agency recommended precautionary "do not exceed" Beach Action Value (BAV) of 235 CFU of *E. coli* bacteria per 100 mL of water sample for early alert to freshwater recreators, including families with children.

- ↔ Water sample not collected - dangerous conditions (water level to high, swift/rushing flow, log jam, etc.)
- ↔ Rotating H2O sample collection locations due to lack of funding
